penetrate into the material. (M. Bergh, K. Magnusson, J. Lars G. Nilsson, A. T. Karlberg, Contact Dermatitis, 1998, 39, 14-20 and M. Donbrow in: Nonionic Surfactants, Physical Chemistry, New York Surf. Sci. Series Vol. 23/1987, p. 1011-1073).

The VOC Directive 2010/75/EU and Directive 2004/42/EC of the European Community are complex regulations. Only based on the properties of a substance it is not possible to make a decision whether this regulation applies to the substance or not. A statement can be made only in connection with the application and the conditions of use.

As a producer of raw materials we do not have information on actual usage and conditions of use. Therefore, we can only make a statement about the volatility and the boiling point under standard conditions. You will find this information in chapter 9 of our material safety data sheet.

According to Article 2 of the SR 814.018 VOCs are liable for tax if they are listed on the positive list of substances (Annex 1) or contained in products mentioned in the positive list of products (Annex 2). According to Article 8(a) of the SR 814.018, those mixtures and products are exempted from tax in which the VOC content does not exceed 3 per cent (% by weight).

To the best of our knowledge, assuming the use of the raw materials and manufacturing process currently employed, the product does not contain > 3% of the substances on the positive list of substances (annex 1) of the SR 814.018.

Based on information concerning the raw materials, production process and equipment used plant protection products are not likely to be present.

Based on information concerning the raw materials, production process and equipment used insecticides is not expected to be present and no insecticides has been used

Based on information concerning the raw materials, production process and equipment used phenol is not expected to be present and no phenol has been used.

**APEO, cloroparaffine, composti organici alogenati**

**APEOs, chloroparaffines, AOX**

Based on information concerning the raw materials, production process and equipment used they are not likely to be present.

**Mercaptani**

**Mercaptanes**

Based on information concerning the raw materials, production process and equipment used they are not likely to be present.

**Melamine**

**Melamine**

Based on information concerning the raw materials, production process and equipment used they are not likely to be present.

**Lattosio**

**Lactose**

Based on information concerning the raw materials, production process and equipment used it is not likely to be present.

**Aflatossine/Micotossine**

**Aflatoxines/Mycotoxines**

Based on information concerning the raw materials, production process and equipment used aflatoxin/mycotoxin are not likely to be present.

**Lattice**

**Latex**

The product doesn't contain natural latex and that natural latex is not used/produced in any step of the production process.

**Nitrati e Nitriti**

**Nitrates and Nitrites**

Based on information concerning the raw materials, production process and equipment used they are not likely to be present.

**Amine aromatiche**

**Aromatic amines**

Based on information concerning the raw materials, production process and equipment used aromatic amines are not likely to be present.

**Coloranti azoici**

**Azo dyes**

Based on information concerning the raw materials, production process and equipment used azo dyes are not likely to be present.

**3-Benzilidene Canfora**

**3-Benzylidene Camphor**

Based on information concerning the raw materials, production process and equipment used it is not likely to be present.

**Ormoni, antibiotici, steroidi e altri ingredienti (naturali o chimici) dannosi per le funzioni del corpo umano**

**Hormones, antibiotics, steroids and other ingredients (natural or chemical) dangerous for the body functionality**

Based on information concerning the raw materials, production process and equipment used they are not likely to be present.

**PBT/vPvB**

**PBT/vPvB**

Based on information concerning the raw materials, production process and equipment used they are not likely to be present.

It is according Regulation 1223/2009, its annexes and its further amendments. We are EFfCI GMP certified.</p> <p>Yes</p> <p>Intermediates and starting materials are of non-animal origin. Product is made by a process in which only auxiliaries of non-animal origin have been used. Processing equipment is only used for products of non-animal origin. Product is made by a process in which only auxiliaries of non-ethanol origin have been used.</p> <p>Not applicable, cultivated vegetable raw materials</p> <p>The product does not fall into the scope of the Nagoya protocol. The protocol is applicable to raw materials that contain functional units of heredity. As for the primary petro- &amp; oleochemical derivatives that are used in production processes this is not the case.</p>
<p><b>8.1 Data di Retest</b> <i>Retest date</i></p>	<p>The product, if well preserved and in its original sealed containers, maintains its appearance and characteristics for at least two years from delivery date. After this time, product can be used but it must be rechecked (pH and microbial count if pH is lower than 10.8) Depending on the temperature, the pH value may decrease during storage. However the product quality is not negatively influenced above a pH value of 4.0. Nevertheless below pH 10.8 the addition of a preservative is advisable.</p>

**8.2 Stoccaggio**

***Storage recommendation***

Store at room temperature for long periods of time (15°C - 35°C). Products come from plant at 62°C - 63°C, after that temperature decreases according to external conditions and in summer it can take several days to go below 35°C. This physiological process doesn't affect product quality. Protect from cold and prolonged heating.

At temperatures below 10°C and on prolonged storage it can become turbid. The material can be restored to its original appearance by indirect heating and stirring. This doesn't affect the quality of the product. Avoid overheating. Homogenize before using.
