azienda chimica e farmaceutica

SPECIFICA TECNICA

Prodotto: EMULGATOR E 2155

NOME INCI Stearyl Alcohol, Steareth-7, Steareth-10 NOME INCI USA Stearyl Alcohol, Steareth-7, Steareth-10

CAS 112-92-5, 9005-00-9, 9005-00-9

EINECS / ELINCS 204-017-6, //, //

SPECIFICA	METODO	Lim. Inf Lim. Sup.	u.m.

SPECIFICA TECNICA

Prodotto: EMULGATOR E 2155

COMPOSITION:

 Stearyl Alcohol
 25.0 - 50.0
 %

 Steareth-7
 25.0 - 50.0
 %

 Steareth-10
 25.0 - 50.0
 %

- EMULGATOR E products are used as emulsifiers for the preparation of stable cosmetic or pharmaceutical O/W emulsion.
- They are compatible with other nonionic emulsifiers as well as with anionic, cationic or amphoteric ingredients.
- pH values of the emulsions from 2.5 up to 11 are attainable.
- EMULGATOR E 2149 is especially suitable for the preparation of highly viscous to soft-cream-like emulsions.
- For preparations of creamy consistency EMULGATOR E 2155 is recommended.
- If a combination of WMULGATOR E 2155 and TEGINACID H is used, it possible to produce very stable O/W-lotions.

PREPARATION

Emulsifiers are heated together with fats, waxis and oil-soluble ingredients to 65 to 80 °C. The wather phase, at the same temperature, is stirred into the oil phase.

For creams the particle size should be adjusted to 1 - 3 μ m, for lotions to below 1 μ m.

If necessary the emulsion should be homogenized at 65 - 60 °C.

Cool the emulsion ensuring continual slight motion by stirring.

Add perfume and other temperature-sensitive substances at 40 - 45°C.

Application

- O/W creams
- depilatory creams
- EMULGATOR E 2155 in combination with TEGINACID H
- deo roll-ons

Recommended usage concentration

4.0 - 6.0 %
